Tea bags the technological term used in the pharmaceutical production of tea bags. It is used by specialists with regard to batch dosing of tea in a special material in the form of sachets. There is bulk and weight packing in tea bags.

Wet Granulation the technological process of the production of granules from powder materials, in which the raw material is moistened with various liquids. The best effect is obtained by moistening with gluing agents. There are models of granulators that simultaneously moisturize and granulate the powder. It is necessary to dry and powder the finished pellets.

Melting analyzer type of laboratory equipment for determining the melting point of drugs, impurities, dyes used in pharmaceutical production of drugs. The temperature of the melting point of the substance is controlled when it is converted into a liquid state from a solid. Such testing is a convincing way of detecting impurities in the substance.

Heat-sealable layer a technological term used in pharmaceutical production. Application of roll materials to the surface: aluminum foil, laminated paper or polyethylene film, layer with adhesive composition fixed by heating.

Mixing of powders a technological term used in the pharmaceutical production of medicines. Used for the process of mixing several bulk powdered pharmaceutical and cosmetic products into a homogeneous mass.

Mixer for pharmaceuticals a technological term used in the pharmaceutical production of medicines. Used for all types of mixers for mixing loose powder and liquid pharmaceutical and cosmetic products.

Perforated stainless steel a technological term used in the pharmaceutical production of medicines. A special kind of stainless steel, of various thickness, with a number of through holes produced industrially.

Pharmaceutical company from Republic of Cameroon.

Dragee boiler type of pharmaceutical process equipment. Used for the formation of multi-layered pellets, as well as for applying decorative and protective coating to the surface of tablets.

Powder compactor type of pharmaceutical equipment for compaction of dry powder with subsequent production of granules. In cases of impossibility of wet granulation in a compactor, plates are dried from a dry powder, and then destroyed. As a result, a pellet is obtained which increases the fluidity and flowability of the granules.
