Coding machine type of pharmaceutical marking equipment. Used for printing and mechanical information about the release date and the expiration date on the pharmaceutical packaging of goods.

Logo on the capsule the technological process of marking in the pharmaceutical production of gelatin capsules. The manufacturer's logo is printed on the surface of the capsule by cold printing. At the same time, food colors and special equipment are used.

Blister it type of pharmaceutical packaging. Usually, PVC roll materials and aluminum foil are used. Blisters have cells of various sizes and shapes. The number of cells in the blister is determined by the manufacturer. Cells are filled with tablets, capsules, pastes. After filling the cells, the blisters are automatically sealed with aluminum foil or other materials. Forms of blisters and their sizes are made according to the design of clients.

Sealed packaging the technological term used in the pharmaceutical packaging of medicines. It is used by specialists to create the best conditions for the preservation of drugs in plastic, paper and glass containers.

Hydraulic press type of pharmaceutical equipment. Used for the production of industrial batches of tablets of large weight and size. In addition to hydraulic presses, there is a large amount of tablet equipment: rotary tablet presses and pneumatic models of tablet presses. Hydraulic presses create a maximum compression force of several tens of tons.

Packing of bottles the technological process in the pharmaceutical production of drugs. Automatic process of forming cells in plastic or cardboard packaging with filling cells with penicillin bottles with medicinal forms.

Lyophilization the technological process in the pharmaceutical production of drugs. High-technological drying of liquid and solid materials, followed by preservation of the original structure in dried materials, physical and chemical characteristics, biological activity.

Freeze-dried type of pharmaceutical process equipment. Used for the production of dehydration and drying of food, pharmaceutical and biological products. Moisture in a vacuum condenses and freezes. Vacuum drying allows you to rehydrate and restore the product by adding water.

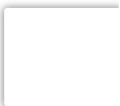

Stainless steel tanks a technological term used in the pharmaceutical production of medicines. Made from food grade stainless steel 304 and 316 brands of tanks, tanks, cans and barrels for storing pharmaceutical raw materials and products.

Meltdown analyzer type of laboratory pharmaceutical equipment for analysis of the melting process of suppositories. The device has a magnetic pump to create circulation of the water flow, evenly distributes it through the system, and the «water bath» maintains the same temperature in the system.
