Sublimator type of pharmaceutical process equipment. Used for the production of dehydration and drying of food, pharmaceutical and biological products. Moisture in a vacuum condenses and freezes. There are laboratory models for research and industrial installations.

Drageing the technological term used in the pharmaceutical production of tablets. Draining is the process of layer-by-layer coating on the surface of tablets and dragees. Shells perform decorative and protective functions, while various dyes and food polymeric materials are used.

Packaging equipment type of pharmaceutical equipment. Used for packaging of finished pharmaceutical products. It is installed in some automatic lines at the final stage or by individual machines. Differ material and performance.

Suppository line type of pharmaceutical production equipment. It is used for the formation of rolls of PVC and PE tape with cells. The equipment produces an automatic filling of the suppository mass into the cells, after which it is sealed and cooled.

Blister packing machine type of pharmaceutical packaging equipment. Used for the automatic formation of a cellular packaging made of roll PVC material. The machine automatically fills the cells with the product – tablets, capsules, dragees, liquids and pastes. After filling the cells, the equipment seals the surface of the blisters with aluminum foil or other heat-sealing films.

Label of tea bag the technological term used in the pharmaceutical production of tea bags. It is used by specialists with respect to a paper label, which is attached to a sachet of filter paper on a string.

Pharmaceutical company from Republic of Nauru.

Packing of ampoules the technological process in the pharmaceutical production of drugs. Automatic process of forming cells in plastic or cardboard packaging with the filling of cells with glass ampoules with medicinal forms.

Plastic box the technological term used in the pharmaceutical packaging of medicines. It is used by specialists in relation to materials for the best preservation of medicines. Applicable for all types and forms of plastic containers.

Thickness Analyzer type of laboratory pharmaceutical equipment that is used to measure the thickness of tablets or walls of hard gelatin capsules. The device controls the measurement of the thickness of the top and the walls of the gelatin capsule.
