Wet Granulation the technological process of the production of granules from powder materials, in which the raw material is moistened with various liquids. The best effect is obtained by moistening with gluing agents. There are models of granulators that simultaneously moisturize and granulate the powder. It is necessary to dry and powder the finished pellets.

Dosage of the ointment the technological process of dispensing pharmaceutical products of plastic consistency into individual packaging. Plastic and aluminum tubes are used. The main materials of dosing: creams, ointments, pastes and gels.

Laboratory equipment table devices and machines for research and measurement purposes. And also for testing and analytical work. It is widely used in the pharmaceutical industry to develop technology in the production of pilot batches of medicinal products.

Capsules type of pharmaceutical products. Capsules are formed using gelatin, which forms the walls of the shell. They are used for dosage of medicinal preparation in solid and liquid forms. Capsules are water-soluble.

Pharmaceutical company from Republic of Rwanda.

Heat-sealable layer a technological term used in pharmaceutical production. Application of roll materials to the surface: aluminum foil, laminated paper or polyethylene film, layer with adhesive composition fixed by heating.

Suppository tape the technological term used in the pharmaceutical production of rectal and vaginal suppositories. They are contoured cells from combined PVC and PE tape, into which the heated suppository mass is poured.

Stainless steel wire mesh a technological term used in the pharmaceutical production of medicines. A special kind of stainless steel, of various thickness, with a multitude of cells or holes produced industrially.

Condom packaging the technological process in the pharmaceutical production of medical products. Automatic process of layout in condom cells with subsequent packaging in metallized films, for individual and group packaging.
