Dissolution analyzer type of laboratory equipment that is used to control the disintegration of solids of drugs in the laboratory. The equipment controls the temperature level, the time and the speed of the agitator revolutions in the tanks.

Drageing boiler type of pharmaceutical process equipment. Used for the formation of multi-layered pellets, as well as for applying decorative and protective coating to the surface of tablets.

Dragee type of pharmaceutical and food products. Dragee is formed in drageeing boilers. On the granulated sugar, various liquid materials are applied by spraying, followed by drying with hot air, if necessary, dry powder is applied to the forming dragees. Forming the dragee shell allows you to adjust the size and color of the shell.

Filling line type of pharmaceutical process equipment. Used for automatic dosing and batch filling of plastic and glass bottles with liquid pharmaceutical and biological products.

Rolling the technological term used in the pharmaceutical production of granules. The pre-moistened powder is placed on a high-speed rotating disc on which incisions are formed. The principle of rolling a powder into a uniform granule size is used, which requires subsequent drying.

Liner to medicine a technological term used in the pharmaceutical production of medicines. It is used by specialists in relation to a paper sheet with information about the intended use, the way of application and the side effects of medicines.

Blister production the process occurs in automatic and semi-automatic blister machines. Used roll materials PVC and aluminum foil. During heating on the PVC tape, cells are formed which are automatically filled with medicinal products, the finished blisters are sealed with aluminum foil on top. The foil is pre-applied with information about the products. The functions of the blister machine allow the application of the embossing method and the batch number.

Cartonage a professional term – short for a cardboard machine, also refers to the process of packaging blisters, tubes, suppositories and other pharmaceutical products in a cardboard box.

Conveyor scales type of pharmaceutical auxiliary equipment. Used for continuous weighing of finished pharmaceutical products and rejection by weight. It is installed in some packaging lines at the final stage of control.
