Hard gelatin capsule type of pharmaceutical products. Stable thin-walled gelatin bowls made of two parts, bases and lids. They are used for packaging grains and powdered medicines. Solid capsules have standard sizes and are subdivided into numbers 000,00,0,1,2,3,4. Blister it type of pharmaceutical packaging. Usually, PVC roll materials and aluminum foil are used. Blisters have cells of various sizes and shapes. The number of cells in the blister is determined by the manufacturer. Cells are filled with tablets, capsules, pastes. After filling the cells, the blisters are automatically sealed with aluminum foil or other materials. Forms of blisters and their sizes are made according to the design of clients. Blister with capsules the kind of packaging that maximizes the storage of hard gelatin capsules with powders and soft gelatin capsules with oils, from the effects of the environment. The main means of affecting the capsule shell is moisture. Being in the individual cell of the blister, the gelatin capsule is maximally protected. Blister packing machine type of pharmaceutical packaging equipment. Used for the automatic formation of a cellular packaging made of roll PVC material. The machine automatically fills the cells with the product – tablets, capsules, dragees, liquids and pastes. After filling the cells, the equipment seals the surface of the blisters with aluminum foil or other heat-sealing films.
