Wet Granulation the technological process of the production of granules from powder materials, in which the raw material is moistened with various liquids. The best effect is obtained by moistening with gluing agents. There are models of granulators that simultaneously moisturize and granulate the powder. It is necessary to dry and powder the finished pellets.

Pharmaceutical company from Federative Republic of Brazil.

Powder packaging the technological process of batch dosing of pharmaceutical products in powder form in individual packaging. Used plastic and aluminum containers, as well as glass and plastic containers and other packaging that provides storage. Weighed and volumetric packing of powders is used.

Cellophane machine type of pharmaceutical packaging equipment. Used for wrapping cellophane film cartons to pharmaceutical and medicinal products. There are many types of similar equipment with different capacities.

Condom packaging the technological process in the pharmaceutical production of medical products. Automatic process of layout in condom cells with subsequent packaging in metallized films, for individual and group packaging.

Pharmaceutical mill type of pharmaceutical process equipment. Used for grinding various pharmaceutical and medicinal raw materials. There are many types of similar equipment with different performance, differing in the principle of operation.

Preparation of gelatin the technological process of preparation of pharmaceutical raw materials in the production of gelatin capsules. Gelatin in the form of a powder is mixed with hot water and glycerin, while adding preservatives. The resulting viscous mass forms the shell of the capsules.

Dragee machines type of pharmaceutical process equipment. Used for the formation of multi-layered pellets, as well as for applying decorative and protective coating to the surface of tablets.

Sealing of ampoules technological process of sealing the neck of a glass ampoule after bottling of medicinal and chemical liquids. Automatic filling and sealing machines are used, as well as laboratory desktop ampoule machines.

Suppository line type of pharmaceutical production equipment. It is used for the formation of rolls of PVC and PE tape with cells. The equipment produces an automatic filling of the suppository mass into the cells, after which it is sealed and cooled.
