Filling machine type of pharmaceutical process equipment. Used for automatic dosing and batch filling of plastic and glass bottles with liquid pharmaceutical and biological products.

Sealed packaging the technological term used in the pharmaceutical packaging of medicines. It is used by specialists to create the best conditions for the preservation of drugs in plastic, paper and glass containers.

Dosage of the ointment the technological process of dispensing pharmaceutical products of plastic consistency into individual packaging. Plastic and aluminum tubes are used. The main materials of dosing: creams, ointments, pastes and gels.

Freeze drying type of pharmaceutical process equipment. Used for the production of dehydration and drying of food, pharmaceutical and biological products. Moisture in a vacuum condenses and freezes. Vacuum drying allows you to rehydrate and restore the product by adding water.

Granulator type of pharmaceutical equipment used for granulation of powder materials. The task of using a granulator in the formation of spherical strong granules.

According to the technological principle of operation, the granulators are divided into two groups: with the moisture of the powder and without humidification.

Cream packaging the technological process of dispensing pharmaceutical products of plastic consistency into individual packaging. Used plastic and aluminum tubes, as well as glass and plastic containers.

Drunken barrel type of pharmaceutical process equipment. Used for mixing loose powder pharmaceutical and biological products. A special design feature of the powder mixer allows to avoid dead zones when mixing.

Packing a technological term used in the pharmaceutical production of medicines. It is used by specialists with regard to batch dosing of bulk medicines in various plastic and glass containers. There is bulk and weight packing.

Mixing of powders a technological term used in the pharmaceutical production of medicines. Used for the process of mixing several bulk powdered pharmaceutical and cosmetic products into a homogeneous mass.

Production of creams the technological process of production of pharmaceutical products. Homogenization is the main technological component, using plastic and aluminum tubes for metered packaging of the resulting creams, ointments, pastes and gels in individual packaging.
