Bottles a technological term used in pharmaceutical production. Individual containers in the form of bottles and containers of various shapes from plastic and glass intended for filling with tablets, granules, capsules or dragees. Filling and capping the technological term used in the pharmaceutical production of liquid medicines. The equipment used automatically dispenses the vials, dispenses the portions of liquid and bottles the neck of the bottle with rubber stoppers and aluminum caps. Filling line type of pharmaceutical process equipment. Used for automatic dosing and batch filling of plastic and glass bottles with liquid pharmaceutical and biological products. Pills type of pharmaceutical products. Tablets are a solid dosage form. The process of producing tablets is pressing the powder using a tablet press. The composition of the tablets includes the active substance and various excipients. Classical forms of tablets are planocylindrical with a facet or hemispherical. At present, tablets can be of any shape and size, contain logos. Modern tablets are covered with protective covers.
