Pharmaceutical sieve type of pharmaceutical process equipment. It is used for the separation into fractions of various pharmaceutical and medicinal raw materials. There are many types of similar equipment with different capacities.

Pump dispenser type of pharmaceutical process equipment. Used for dosed supply of liquid materials in the manufacture of drugs. Dosers can work with liquids and viscous pastes, gels, ointments.

Tube filling machine type of pharmaceutical process equipment. Used for filling plastic or aluminum tubes with various creams and ointments for pharmaceutical and cosmetic use. The process can be automated by feeding empty tubes, filling a certain dose of material and sealing the edge of the tube.

Logo on the capsule the technological process of marking in the pharmaceutical production of gelatin capsules. The manufacturer's logo is printed on the surface of the capsule by cold printing. At the same time, food colors and special equipment are used.

Dissolution analyzer type of laboratory equipment that is used to control the disintegration of solids of drugs in the laboratory. The equipment controls the temperature level, the time and the speed of the agitator revolutions in the tanks.

Capsule production the technological process of obtaining pharmaceutical products in the production of gelatin capsules. The term can be attributed to the process of obtaining hard gelatin capsules, as well as soft gelatin capsules (suture and seamless).

Blister with tablets the type of packaging that maximizes the storage of tablets from powder from the effects of the environment. The main means of affecting the tablet is moisture. In the individual cells of the blisters, the tablets are maximally protected.

Packaging equipment type of pharmaceutical equipment. Used for packaging of finished pharmaceutical products. It is installed in some automatic lines at the final stage or by individual machines. Differ material and performance.

Pharmaceutical company from Republic of the Marshall Islands.

Condom packaging the technological process in the pharmaceutical production of medical products. Automatic process of layout in condom cells with subsequent packaging in metallized films, for individual and group packaging.
