Blister production the process occurs in automatic and semi-automatic blister machines. Used roll materials PVC and aluminum foil. During heating on the PVC tape, cells are formed which are automatically filled with medicinal products, the finished blisters are sealed with aluminum foil on top. The foil is pre-applied with information about the products. The functions of the blister machine allow the application of the embossing method and the batch number.

Quality of tablets the technological term used in the pharmaceutical production of tablets. Ready-made tablets always go through several stages of preliminary testing, before mass production starts. Weight, thickness, strength, dissolution time, presence of damages and impurities are monitored.

Suppository tape the technological term used in the pharmaceutical production of rectal and vaginal suppositories. They are contoured cells from combined PVC and PE tape, into which the heated suppository mass is poured.

Vacuum packaging the technological process of packaging pharmaceutical products by removing air from any containers. Used for plastic bags, glass and plastic bottles and bottles.

Blister it type of pharmaceutical packaging. Usually, PVC roll materials and aluminum foil are used. Blisters have cells of various sizes and shapes. The number of cells in the blister is determined by the manufacturer. Cells are filled with tablets, capsules, pastes. After filling the cells, the blisters are automatically sealed with aluminum foil or other materials. Forms of blisters and their sizes are made according to the design of clients.

Drageing the technological term used in the pharmaceutical production of tablets. Draining is the process of layer-by-layer coating on the surface of tablets and dragees. Shells perform decorative and protective functions, while various dyes and food polymeric materials are used.

Viewing table type of pharmaceutical process equipment. Used for the production of visual quality control of tablets and capsules, as well as inspection of vials and ampoules for the presence of foreign inclusions and glass cracks. Pharmaceutical company from Republic of China.

Capsulator type of pharmaceutical equipment. Used to automatically fill gelatin capsules with powders, or to form capsules of gelatinous materials, followed by filling with oil or fat. Capsules can be referred to as manual semi-automatic machines, as well as automatic equipment of high productivity.
