Dry granulation the technological term used in the pharmaceutical production of granules. This method can be compared with grinding large pieces of raw materials into granules of a uniform fraction. The principle of wiping raw materials through a metallized stainless mesh is used. Pharmaceutical company from Kingdom of Norway.

Mixing of powders a technological term used in the pharmaceutical production of medicines. Used for the process of mixing several bulk powdered pharmaceutical and cosmetic products into a homogeneous mass.

Strip packing type of packing of tablets for pharmaceutical packaging equipment. It is used in the formation of soft individual cell packs of tablets. Combined material of paper and polyethylene film.

V-shaped mixer type of pharmaceutical process equipment. Used for mixing loose powder pharmaceutical and biological products. A special design feature of the powder mixer allows to avoid dead zones when mixing.

Filling and capping the technological term used in the pharmaceutical production of liquid medicines. The equipment used automatically dispenses the vials, dispenses the portions of liquid and bottles the neck of the bottle with rubber stoppers and aluminum caps.

Vibrating sieve type of pharmaceutical process equipment. It is used for the separation into fractions of various pharmaceutical and medicinal raw materials. There are many types of similar equipment with different capacities.

Wet Granulation the technological process of the production of granules from powder materials, in which the raw material is moistened with various liquids. The best effect is obtained by moistening with gluing agents. There are models of granulators that simultaneously moisturize and granulate the powder. It is necessary to dry and powder the finished pellets.

Pharmaceutical company from Kingdom of Denmark.
