Vibrating sieve type of pharmaceutical process equipment. It is used for the separation into fractions of various pharmaceutical and medicinal raw materials. There are many types of similar equipment with different capacities.

Packing in a blister pack the technological process in the pharmaceutical production of drugs. Automated process of formation of a cellular plastic package with the filling of cells with tablets, gelatin capsules or other dosage forms, followed by sealing with aluminum foil or cardboard.

Blister production the process occurs in automatic and semi-automatic blister machines. Used roll materials PVC and aluminum foil. During heating on the PVC tape, cells are formed which are automatically filled with medicinal products, the finished blisters are sealed with aluminum foil on top. The foil is pre-applied with information about the products. The functions of the blister machine allow the application of the embossing method and the batch number.

Cartoning machine type of pharmaceutical packaging equipment. Used packaging of various goods in cardboard boxes. In addition to embedding goods from cardboard machines, there is a function of the tab of paper instructions.

Production of boilies technological process of complementary feeding for fishing. From a dough-like material, balls of different diameters are formed.

Embossing date a technological term used in the pharmaceutical production of medicines. It is used in the manufacture for the digital indication of the period of use of finished medicines.

Aluminium foil type of packaging material for pharmaceutical blister equipment. Used in the formation of blisters for pharmaceutical and medicinal products. Thin film of aluminum with a layer of thermo-weldable lacquer.

Screw capping the technological process of capping pharmaceutical products after placement in individual packaging. Plastic and aluminum caps for glass and plastic bottles and bottles are used.

Laboratory press type of pharmaceutical equipment. Used in laboratories for testing experimental batches of tablets, by pressing in molds of tablet mass. In addition to

laboratory presses, there is a large amount of tablet equipment: rotary tablet presses, hydraulic and pneumatic models of tablet presses. Pharmaceutical company from Russian Federation.
