Blister production the process occurs in automatic and semi-automatic blister machines. Used roll materials PVC and aluminum foil. During heating on the PVC tape, cells are formed which are automatically filled with medicinal products, the finished blisters are sealed with aluminum foil on top. The foil is pre-applied with information about the products. The functions of the blister machine allow the application of the embossing method and the batch number.

Hardness analyzer type of laboratory pharmaceutical equipment for measuring the hardness of tablets and granules. The device is equipped with a high-precision sensor that monitors hardness and displays data on the front panel. Testing the hardness of tablets is continuous.

Plastic tubes type of pharmaceutical packaging. Used for dispensing cream and ointments. After sealed sealing is a reliable container for storing and using cosmetic and medicinal products.

Water treatment a technological term used in the pharmaceutical production of medicines. Special means for water treatment used in production lines of medicine production. There are both separate lines and individual units.

Freeze-dried type of pharmaceutical process equipment. Used for the production of dehydration and drying of food, pharmaceutical and biological products. Moisture in a vacuum condenses and freezes. Vacuum drying allows you to rehydrate and restore the product by adding water.

Cartoning machine type of pharmaceutical packaging equipment. Used packaging of various goods in cardboard boxes. In addition to embedding goods from cardboard machines, there is a function of the tab of paper instructions.

Self-adhesive labels a technological term used in pharmaceutical production. It is a roll material with a paper or plastic backing, an adhesive layer on one side, and an image printed on the other side of the printer.

Packing of bottles the technological process in the pharmaceutical production of drugs. Automatic process of forming cells in plastic or cardboard packaging with filling cells with penicillin bottles with medicinal forms.

Dry granulation the technological term used in the pharmaceutical production of granules. This method can be compared with grinding large pieces of raw materials into granules of a uniform fraction. The principle of wiping raw materials through a metalized stainless mesh is used.

The pharmaceutical company from Arab Republic of Egypt.
