Tube filling machine type of pharmaceutical process equipment. Used for filling plastic or aluminum tubes with various creams and ointments for pharmaceutical and cosmetic use. The process can be automated by feeding empty tubes, filling a certain dose of material and sealing the edge of the tube.

Pump dispenser type of pharmaceutical process equipment. Used for dosed supply of liquid materials in the manufacture of drugs. Dosers can work with liquids and viscous pastes, gels, ointments.

Packaging equipment type of pharmaceutical equipment. Used for packaging of finished pharmaceutical products. It is installed in some automatic lines at the final stage or by individual machines. Differ material and performance.

Coding machine type of pharmaceutical marking equipment. Used for printing and mechanical information about the release date and the expiration date on the pharmaceutical packaging of goods.

Sublimation the technological process in the pharmaceutical production of drugs. High-technological drying of liquid and solid materials, followed by preservation of the original structure in dried materials, physical and chemical characteristics, biological activity.

Pressing the technological process of the production of tablets from powder materials, in which the raw material is compressed in the press forms of a tablet press. The best effect for pressing gives the introduction of a glue additive in the tablet composition. There is direct pressing and pre-pressing.

Cellophanning the technological process of packaging pharmaceutical products in the production of medicines. It is used in the final stage of the cardboard machine. Finished boxes are wrapped with a transparent thin film to preserve the presentation of the packaging.

Liters a technological term used in the pharmaceutical production of medicines. It is used for metal letters and numbers used to apply control information about the lot number of the product and the date of release and use of pharmaceutical and cosmetic products.

Wet Granulation the technological process of the production of granules from powder materials, in which the raw material is moistened with various liquids. The best effect is obtained by moistening with gluing agents. There are models of granulators that simultaneously moisturize and granulate the powder. It is necessary to dry and powder the finished pellets.
