Blistering the technological process of packaging pharmaceutical products in durable individual packaging made of PVC and aluminum foil. Blister packs are formed during packaging heating, sterilizing at the same time. It is one of the popular types of full-fledged drug packaging.

Production of creams the technological process of production of pharmaceutical products. Homogenization is the main technological component, using plastic and aluminum tubes for metered packaging of the resulting creams, ointments, pastes and gels in individual packaging.

Dragee the technological term used in the pharmaceutical production of tablets. Draining is the process of layer-by-layer coating on the surface of tablets and dragees.

Shells perform decorative and protective functions, while various dyes and food polymeric materials are used.

Label of tea bag the technological term used in the pharmaceutical production of tea bags. It is used by specialists with respect to a paper label, which is attached to a sachet of filter paper on a string.

Analytical equipment it is very important to control the quality of raw materials and finished medicines in pharmaceutical production. Using laboratory research, we follow the indications of the moisture level, the melting time, the transparency, the decay and dissolution time, the quantitative composition, melting, the parameters of hardness, thickness, and ductility.

Pharmaceutical company from Republic of Kenya.

Numerator type of pharmaceutical process equipment. Used for labeling pharmaceutical and biological products by printing or embossing information on cardboard, paper, foil.

Pharmaceutical pump type of pharmaceutical process equipment. Used to control the supply of liquid materials in the manufacture of drugs. Pumps can work with liquids and viscous pastes, gels, ointments.

Dragee type of pharmaceutical and food products. Dragee is formed in drageeing boilers. On the granulated sugar, various liquid materials are applied by spraying, followed by drying with hot air, if necessary, dry powder is applied to the forming dragees. Forming the dragee shell allows you to adjust the size and color of the shell.

Granulate a technological term used in the pharmaceutical production of medicines. Spherical particles obtained by granulating powders. Granulate is used for tableting and filling hard gelatin capsules.
