Self-adhesive labels a technological term used in pharmaceutical production. It is a roll material with a paper or plastic backing, an adhesive layer on one side, and an image printed on the other side of the printer.

Pills type of pharmaceutical products. Tablets are a solid dosage form. The process of producing tablets is pressing the powder using a tablet press. The composition of the tablets includes the active substance and various excipients. Classical forms of tablets are planocylindrical with a facet or hemispherical. At present, tablets can be of any shape and size, contain logos. Modern tablets are covered with protective covers.

Heat-sealable layer a technological term used in pharmaceutical production. Application of roll materials to the surface: aluminum foil, laminated paper or polyethylene film, layer with adhesive composition fixed by heating.

Filling of liquids a technological term used in the pharmaceutical production of medicines. It is used by specialists with regard to the metered packing of liquids in various plastic and glass containers.

Pharmaceutical company from Turkish Republic of Northern Cyprus.

Lyophilization the technological process in the pharmaceutical production of drugs. High-technological drying of liquid and solid materials, followed by preservation of the original structure in dried materials, physical and chemical characteristics, biological activity.

Tabletting Machine type of pharmaceutical equipment. Used in pharmaceutical production for the industrial release of batches of tablets, by pressing in molds of tablet mass. Also used are rotary tablet presses, hydraulic and pneumatic models of tablet presses.

Dragee the technological term used in the pharmaceutical production of tablets. Draining is the process of layer-by-layer coating on the surface of tablets and dragees. Shells perform decorative and protective functions, while various dyes and food polymeric materials are used.

Rotary tablet press type of pharmaceutical equipment. Used for the automatic production of tablets by pressing in molds of tablet mass. In addition to rotary tablet presses, there is a large amount of tablet equipment: laboratory tablet presses, hydraulic and pneumatic models of tablet presses.

Dispenser type of pharmaceutical process equipment. Used for batch packing of liquid, viscous bulk solids. Dosing is carried out by piston and chamber method. There are models of laboratory and industrial use.
