Packing of ampoules the technological process in the pharmaceutical production of drugs. Automatic process of forming cells in plastic or cardboard packaging with the filling of cells with glass ampoules with medicinal forms.

The fluidized bed a technological term used in the pharmaceutical industry. It refers to the process of granulation in a fluidized bed, represents a mixture of liquid and powder, resulting in perfectly spherical granules. The fluidized bed is the best way to create a multilayer pellet. Pharmaceutical company from Republic of Cyprus.

Numerator type of pharmaceutical process equipment. Used for labeling pharmaceutical and biological products by printing or embossing information on cardboard, paper, foil.

Granulator type of pharmaceutical equipment used for granulation of powder materials. The task of using a granulator in the formation of spherical strong granules.

According to the technological principle of operation, the granulators are divided into two groups: with the moisture of the powder and without humidification.

Production of boilies technological process of complementary feeding for fishing. From a dough-like material, balls of different diameters are formed.

Blister production the process occurs in automatic and semi-automatic blister machines. Used roll materials PVC and aluminum foil. During heating on the PVC tape, cells are formed which are automatically filled with medicinal products, the finished blisters are sealed with aluminum foil on top. The foil is pre-applied with information about the products. The functions of the blister machine allow the application of the embossing method and the batch number.

Pharmaceutical company from Slovak Republic.

PVC containers the technological term used in the pharmaceutical packaging of medicines. It is used by specialists with regard to the creation of a rigid cell packaging for drugs from plastic PVC tape.
