Conveyor type of pharmaceutical equipment. Used for remote movement and automatic feed of products in production lines. The speed of the product is regulated by frequency converters.

3D Mixer – type of pharmaceutical process equipment. Used for mixing loose powder pharmaceutical and biological products. The special design of the latest generation of powder mixers avoids dead zones when mixing.

Cartonage a professional term – short for a cardboard machine, also refers to the process of packaging blisters, tubes, suppositories and other pharmaceutical products in a cardboard box.

Pills type of pharmaceutical products. Tablets are a solid dosage form. The process of producing tablets is pressing the powder using a tablet press. The composition of the tablets includes the active substance and various excipients. Classical forms of tablets are planocylindrical with a facet or hemispherical. At present, tablets can be of any shape and size, contain logos. Modern tablets are covered with protective covers. Pharmaceutical company from Republic of India.

Dispenser type of pharmaceutical process equipment. Used for batch packing of liquid, viscous bulk solids. Dosing is carried out by piston and chamber method. There are models of laboratory and industrial use.

Gelatin the technological term used in the pharmaceutical manufacture of hard and soft capsules. Raw materials in the form of powder, partially hydrolyzed protein collagen, a product of processing connective tissues of animals.

Filling line type of pharmaceutical process equipment. Used for automatic dosing and batch filling of plastic and glass bottles with liquid pharmaceutical and biological products.

Production of creams the technological process of production of pharmaceutical products. Homogenization is the main technological component, using plastic and aluminum tubes for metered packaging of the resulting creams, ointments, pastes and gels in individual packaging.

Blister production the process occurs in automatic and semi-automatic blister machines. Used roll materials PVC and aluminum foil. During heating on the PVC tape, cells

are formed which are automatically filled with medicinal products, the finished blisters are sealed with aluminum foil on top. The foil is pre-applied with information about the products. The functions of the blister machine allow the application of the embossing method and the batch number.
