Analytical equipment it is very important to control the quality of raw materials and finished medicines in pharmaceutical production. Using laboratory research, we follow the indications of the moisture level, the melting time, the transparency, the decay and dissolution time, the quantitative composition, melting, the parameters of hardness, thickness, and ductility.

Fluidized bed a technological term used in the pharmaceutical industry. Refers to the fluidized bed granulation process, represents a mixture of liquid and powder, resulting in perfectly spherical pellets. A fluidized bed, the best way to apply a multi-layer shell to the pellets.

Embossing date a technological term used in the pharmaceutical production of medicines. It is used in the manufacture for the digital indication of the period of use of finished medicines.

Water treatment a technological term used in the pharmaceutical production of medicines. Special means for water treatment used in production lines of medicine production. There are both separate lines and individual units.

Packaging of tea the technological process of dosed tea packing into group and individual packaging. For various types of tea, weight or bulk packing can be used. The tea is divided into large-leaf, medium-leaf, granules and tea dust.

Powder mixer type of pharmaceutical process equipment. Used for mixing loose powder pharmaceutical and biological products. A special design feature of the powder mixer allows to avoid dead zones when mixing.

Blistering the technological process of packaging pharmaceutical products in durable individual packaging made of PVC and aluminum foil. Blister packs are formed during packaging heating, sterilizing at the same time. It is one of the popular types of full-fledged drug packaging.

Cartoning machine type of pharmaceutical packaging equipment. Used packaging of various goods in cardboard boxes. In addition to embedding goods from cardboard machines, there is a function of the tab of paper instructions.

Manufacture of ointments the technological process of production of pharmaceutical products. Homogenization is the main technological component, using plastic and aluminum tubes for metered packaging of the resulting creams, ointments, pastes and gels in individual packaging.

Mixer for liquids type of pharmaceutical process equipment. Used for all types of mixers for mixing liquid pharmaceutical and biological products.
