Rotary tablet press type of pharmaceutical equipment. Used for the automatic production of tablets by pressing in molds of tablet mass. In addition to rotary tablet presses, there is a large amount of tablet equipment: laboratory tablet presses, hydraulic and pneumatic models of tablet presses.

PVC film type of packaging material for pharmaceutical blister equipment. Used in the formation of blisters for pharmaceutical and medicinal products. Colorless, transparent plastic, thermoplastic vinyl chloride polymer.

Manufacture of medicines a technological term used in the pharmaceutical production of medicines. Suitable for all types of solid and liquid forms of medicines and possible ways of their release

Blister production the process occurs in automatic and semi-automatic blister machines. Used roll materials PVC and aluminum foil. During heating on the PVC tape, cells are formed which are automatically filled with medicinal products, the finished blisters are sealed with aluminum foil on top. The foil is pre-applied with information about the products. The functions of the blister machine allow the application of the embossing method and the batch number.

They are used for dosing of medicinal vegetable oils and fats. Seamless capsules have a size of 2 to 14 mm. They have the form of a sphere. Pharmaceutical company from Canada.

Rolling the technological term used in the pharmaceutical production of granules. The pre-moistened powder is placed on a high-speed rotating disc on which incisions are formed. The principle of rolling a powder into a uniform granule size is used, which requires subsequent drying.

Dispenser type of pharmaceutical process equipment. Used for batch packing of liquid, viscous bulk solids. Dosing is carried out by piston and chamber method. There are models of laboratory and industrial use.

Vacuum packaging the technological process of packaging pharmaceutical products by removing air from any containers. Used for plastic bags, glass and plastic bottles and bottles.
