Mixing of powders a technological term used in the pharmaceutical production of medicines. Used for the process of mixing several bulk powdered pharmaceutical and cosmetic products into a homogeneous mass.

Quality of tablets the technological term used in the pharmaceutical production of tablets. Ready-made tablets always go through several stages of preliminary testing, before mass production starts. Weight, thickness, strength, dissolution time, presence of damages and impurities are monitored.

Rolling the technological term used in the pharmaceutical production of granules. The pre-moistened powder is placed on a high-speed rotating disc on which incisions are formed. The principle of rolling a powder into a uniform granule size is used, which requires subsequent drying. Pharmaceutical company from Italian Republic.

Liters a technological term used in the pharmaceutical production of medicines. It is used for metal letters and numbers used to apply control information about the lot number of the product and the date of release and use of pharmaceutical and cosmetic products.

Suppository line type of pharmaceutical production equipment. It is used for the formation of rolls of PVC and PE tape with cells. The equipment produces an automatic filling of the suppository mass into the cells, after which it is sealed and cooled. Pharmaceutical company from Kingdom of Norway.

Packing machine type of pharmaceutical packaging equipment. Used for packaging of finished pharmaceutical products. Used in the composition of automatic lines in the final stage or separately. Models differ in the materials and performance used.

Screw capping the technological process of capping pharmaceutical products after placement in individual packaging. Plastic and aluminum caps for glass and plastic bottles and bottles are used.

Pharmaceutical company from Swiss Confederation.
