Pharmaceutical equipment automatic lines and individual machines that are used in the manufacture and packaging of medicines in the form of tablets, capsules, ointments, suppositories, dragees, briquettes, tinctures, decoctions, syrups, granules, powders, drops and potions.

Granulation of powders the technological process in the pharmaceutical production of drugs. There are two basic needs for granulation, where the pellets are the final product or granulation improve the flowability of the powder in the process. The decision on the need for granulation is taken when it is not possible to use powders with a larger fraction.

Rolling the technological term used in the pharmaceutical production of granules. The pre-moistened powder is placed on a high-speed rotating disc on which incisions are formed. The principle of rolling a powder into a uniform granule size is used, which requires subsequent drying.

Manufacture of medicines a technological term used in the pharmaceutical production of medicines. Suitable for all types of solid and liquid forms of medicines and possible ways of their release

Preparation of gelatin the technological process of preparation of pharmaceutical raw materials in the production of gelatin capsules. Gelatin in the form of a powder is mixed with hot water and glycerin, while adding preservatives. The resulting viscous mass forms the shell of the capsules.

Labeling the technological process of marking pharmaceutical products in the production of medicines. It is used on vials, bottles, boxes, ampoules with medicines. Labels are divided into self-adhesive and glue.

Pharmaceutical company from Republic of Kosovo.

Dry granulation the technological term used in the pharmaceutical production of granules. This method can be compared with grinding large pieces of raw materials into granules of a uniform fraction. The principle of wiping raw materials through a metallized stainless mesh is used.
