Pressing the technological process of the production of tablets from powder materials, in which the raw material is compressed in the press forms of a tablet press. The best effect for pressing gives the introduction of a glue additive in the tablet composition. There is direct pressing and pre-pressing.

Pharmaceutical company from Republic of Kiribati.

Manufacture of ointments the technological process of production of pharmaceutical products. Homogenization is the main technological component, using plastic and aluminum tubes for metered packaging of the resulting creams, ointments, pastes and gels in individual packaging.

Meltdown analyzer type of laboratory pharmaceutical equipment for analysis of the melting process of suppositories. The device has a magnetic pump to create circulation of the water flow, evenly distributes it through the system, and the «water bath» maintains the same temperature in the system.

Powder in bags a technological term used in pharmaceutical production. Use of roll materials: aluminum foil, laminated paper or polyethylene film, with adhesive composition for the formation of bags with subsequent filling with powder and granules.

Cartonage a professional term – short for a cardboard machine, also refers to the process of packaging blisters, tubes, suppositories and other pharmaceutical products in a cardboard box.

Conveyor scales type of pharmaceutical auxiliary equipment. Used for continuous weighing of finished pharmaceutical products and rejection by weight. It is installed in some packaging lines at the final stage of control.

Lyophilizer type of pharmaceutical process equipment. Used for the production of dehydration and drying of food, pharmaceutical and biological products. Moisture in a vacuum condenses and freezes. There are laboratory models for research and industrial installations.

Quality of tablets the technological term used in the pharmaceutical production of tablets. Ready-made tablets always go through several stages of preliminary testing, before mass production starts. Weight, thickness, strength, dissolution time, presence of damages and impurities are monitored.
