Blister packing machine type of pharmaceutical packaging equipment. Used for the automatic formation of a cellular packaging made of roll PVC material. The machine automatically fills the cells with the product – tablets, capsules, dragees, liquids and pastes. After filling the cells, the equipment seals the surface of the blisters with aluminum foil or other heat-sealing films.

Pills type of pharmaceutical products. Tablets are a solid dosage form. The process of producing tablets is pressing the powder using a tablet press. The composition of the tablets includes the active substance and various excipients. Classical forms of tablets are planocylindrical with a facet or hemispherical. At present, tablets can be of any shape and size, contain logos. Modern tablets are covered with protective covers.

Glass ampoules type of individual package for liquid pharmaceutical preparations. Used for bottling and storing medicines in a sterile state, has an elongated thin neck and thin glass walls.

Filling of liquids a technological term used in the pharmaceutical production of medicines. It is used by specialists with regard to the metered packing of liquids in various plastic and glass containers.

Polisher type of pharmaceutical process equipment. Used for final polishing of the surface of tablets and hard gelatin capsules after tableting and encapsulation.

Packaging the technological term used in the pharmaceutical packaging of drugs. It is used by specialists in the packaging of medicines in various types of plastic and paper bags.

Analytical equipment it is very important to control the quality of raw materials and finished medicines in pharmaceutical production. Using laboratory research, we follow the indications of the moisture level, the melting time, the transparency, the decay and dissolution time, the quantitative composition, melting, the parameters of hardness, thickness, and ductility.

Sublimator type of pharmaceutical process equipment. Used for the production of dehydration and drying of food, pharmaceutical and biological products. Moisture in a vacuum condenses and freezes. There are laboratory models for research and industrial installations.

Laboratory equipment table devices and machines for research and measurement purposes. And also for testing and analytical work. It is widely used in the pharmaceutical industry to develop technology in the production of pilot batches of medicinal products.

Self-adhesive labels a technological term used in pharmaceutical production. It is a roll material with a paper or plastic backing, an adhesive layer on one side, and an image printed on the other side of the printer.
