Capsule deduster type of pharmaceutical process equipment. Used to mechanically remove powder residues from the surface of hard gelatin capsules during capsulation.

Blister packing machine type of pharmaceutical packaging equipment. Used for the automatic formation of a cellular packaging made of roll PVC material. The machine automatically fills the cells with the product — tablets, capsules, dragees, liquids and pastes. After filling the cells, the equipment seals the surface of the blisters with aluminum foil or other heat-sealing films.

Equipment from China. China is the leader in the production of pharmaceutical equipment in the world. The ratio of acceptable cost and quality makes obvious the choice of equipment produced in this country.

Pharmaceutical company from Republic of Zimbabwe.

Heat-sealable layer a technological term used in pharmaceutical production. Application of roll materials to the surface: aluminum foil, laminated paper or polyethylene film, layer with adhesive composition fixed by heating.

Dispenser type of pharmaceutical process equipment. Used for batch packing of liquid, viscous bulk solids. Dosing is carried out by piston and chamber method. There are models of laboratory and industrial use.

Sealed packaging the technological term used in the pharmaceutical packaging of medicines. It is used by specialists to create the best conditions for the preservation of drugs in plastic, paper and glass containers.

Liner to medicine a technological term used in the pharmaceutical production of medicines. It is used by specialists in relation to a paper sheet with information about the intended use, the way of application and the side effects of medicines.

Blister with tablets the type of packaging that maximizes the storage of tablets from powder from the effects of the environment. The main means of affecting the tablet is moisture. In the individual cells of the blisters, the tablets are maximally protected.

Centrifuge type of pharmaceutical equipment for the removal of liquids in the production of drugs and raw materials. The work of the centrifuge is based on centrifugal forces, which, during rotation, remove liquid through a perforated drum.
